PROFESSIONAL SUMMARY

Data Analyst and AI & Data Science engineer with a strong foundation in Python, SQL, Power BI and machine learning. Skilled in developing computer vision applications and creating analytical dashboards. Strong ability to structure unorganized data, design efficient workflows and translate technical outputs into practical business use cases. NVIDIA-certified training in Deep Learning, CUDA Python and Anomaly Detection. Designed and shipped projects spanning computer vision, predictive analytics and AI-powered systems from scratch. Fluent in modern AI-assisted workflows to move faster and build smarter. A problem-solver who doesn't just analyze data but engineers meaning from it.

CORE SKILLS

Languages & Query: Python · SQL · JavaScript · HTML5/CSS

BI & Visualization: Power BI · Advanced Excel · Plotly · Seaborn · Matplotlib

ML & AI: Machine Learning · Deep Learning · Computer Vision · Anomaly Detection · EDA · Feature Engineering

AI Tools: ChatGPT · Claude AI · GitHub Copilot

Frameworks & Tools: Django · Node.js · OpenCV · REST APIs · JSON · NoSQL · Git · Google Colab · Kaggle

WORK EXPERIENCE

Data Analyst Intern | *InfoProfessionals* | March 2025 – May 2025

- Automated end-to-end reporting workflows using Python and SQL, designed Power BI dashboards and Advanced Excel tools to track KPIs, standardize data entry and surface actionable trends.
- Built and maintained Python pipelines integrated with REST API data feeds; leveraged Claude AI and GitHub Copilot to accelerate query writing, reduce development turnaround.

PROJECTS

Expense Navigator (*Django · Python · SQLite · JS*)

- Full-stack expense tracking web app with historical trend analysis to detect overspending and auto-suggest savings goals.
- Built data cleaning and transformation pipelines for CSV/SQLite datasets; used Claude AI for rapid prototyping assistance.

Smart Parking Space Guide (*Python · OpenCV*)

- Real-time CV pipeline detecting occupied/vacant parking spaces using grayscale, thresholding and contour-based feature extraction.
- Applied CUDA-optimized techniques from NVIDIA certification to improve detection performance on video streams.

Virtual Interview Bot & Resume Analyzer (*Node.js · REST API · JSON*)

- Designed AI-powered API workflows for resume parsing, dynamic question generation and scoring using structured JSON schemas.
- Integrated frontend with backend APIs to deliver a real-time, data-driven interview simulation with instant feedback.

EDUCATION

B.Tech. — Artificial Intelligence & Data Science | *PIEMR, Indore* | 2022–2026

12th & 10th — CBSE | *Chameli Devi Public School, Indore* | 2022 · 2020

CERTIFICATIONS

NVIDIA: Fundamentals of Deep Learning · Accelerated Computing with CUDA Python · AI for Anomaly Detection

MathWorks: Machine Learning Onramp · Regression Methods with Machine Learning
